

Flint River Trail progress

March 13, 2009

The former rail bridge spanning the Flint River is under construction. The bridge is in the process of being reconstructed with new decking to provide a safe route across the Flint River. This bridge will connect the trail from the levee surrounding the Case Company to the trail under construction south of Tama Road.

M & H Construction is completing the bridge work as shown in the photos. The Flint River can also be seen in the photo above.
